Ishant Sikdar

Software Engineer - Backend

ishant9715@gmail.com +91 96676 38711 https://www.linkedin.com/in/ishantsikdar

Backend Engineering | **Distributed Systems** | **Scalable Architecture** | **Cloud Infrastructure** | **System Design**

SUMMARY

Backend Engineer with 2+ years of experience building large-scale distributed systems and applications using **Java, MongoDB,** and **AWS/GCP**. Delivered high-impact backend solutions across logistics at **GoSwift** and fintech/enterprise applications at **Opalina**.

TECHNICAL SKILLS

- **Languages -** Java, JavaScript, TypeScript
- **Backend -** Spring Boot, Node.js, REST APIs.
- **Database / Storages -** MongoDB, SQL, Cache, RDBMS, NoSQL.
- **Cloud / Infra -** AWS, GCP, Docker, Git, CI/CD, Linux, Kubernetes.
- **Core Engineering Skills -** System Design, Debugging & Root-Cause Analysis, Performance Optimization, Data Consistency.

EDUCATION

Bachelor of Computer Applications

Guru Gobind Singh Indraprastha University, Delhi, India

2022 - 2025 **CGPA** - 8.9 / 10

KEY PROJECTS

Courier Shipping Integrations - GoSwift

- Integrated major courier partners into GoSwift platform via integrating their shipping **REST APIs** and **webhooks** (such as **Amazon, Flipkart, Blue Dart, Shadowfax**, etc), allowing customers to ship their orders on a wide range of shipping providers.

Non Delivery Automation Suite - GoSwift

- Built an **NDR automation suite**, enabling sellers to configure automated workflows for failed order deliveries through WhatsApp messages and LLM-powered phone calls with **async retries** using **Java, delayed queues-workers** and **webhooks**, aimed at improving order delivery rates

WhatsApp Notification Service - GoSwift

- Built an async WhatsApp notification service using **queue-worker architecture** using **Java** and **MongoDB** to provide live order updates for sellers and customers as a value added service. Handling message reply **idempotency**, message logging, charging users using custom message rates and allowing sellers & customers to opt-in order updates as per their preferences.

Shipment Insurance Platform - GoSwift

- Architected and integrated a provider-agnostic shipment insurance service using **Java, MongoDB**, and the **Strategy Pattern**, enabling sellers to **insure shipments** against loss or damage through their chosen providers and allowing new insurance providers to be integrated through a **plug-and-play architecture.**

WORK EXPERIENCE

Software Development Engineer - I

GoSwift

Nov 2025 - Present Bengaluru, Karnataka

E-commerce logistics and operations platform that helps online businesses manage shipping, fulfillment, checkout, and delivery automation.

- Integrated multiple courier partners into the GoSwift platform, supporting the full shipment lifecycle and processing real-time shipment updates. **Ships 50k+ seller orders daily** and expands the business beyond a limited partner set.
- Built an async WhatsApp notification service in **Java** using **MongoDB change stream-backed queues** to send live order updates to customers, with idempotent handling of message replies and message de-duplication. Delivers **~25k messages/day**, boosting seller and customer conversions.
- Built an address **de-duplication service** that normalizes seller-provided raw addresses and maps them to the seller's registered addresses using **edit-distance** algorithms (**Jaccard** and **Levenshtein**), reducing duplicate pickup addresses **by 90%**. Supports registering new addresses on the fly without polluting the seller's address book with every raw entry, improving **data consistency** and **downstream integrations** with external platforms.
- Scaled the in-house escalation management system's export capability beyond its legacy 5k-item synchronous limit by migrating export processing to an **async queue-worker architecture**. Users can now export over **5k items** and receive the data over email.
- **Resolved 50+ customer and production issues** using real-time alerts, monitoring, and GCP logs, improving system reliability, reducing operational failures, and enhancing customer experience.
- Contributed to **white-labeling GoSwift's features** into a standalone product, introducing multi-platform support within GoSwift so each platform can be owned and operated by an external party.
- Built **trackers** and **management systems** for internal teams to handle manual processes such as Order Payment Method Change requests, Seller Account Closure requests, and Courier and Seller credit notes, giving admins transparent, end-to-end visibility.

SDE Intern

FUTY (Pachisi Ltd)

Oct 2024 - April 2025 London, United Kingdom (Remote)

A fantasy sports startup that builds real-time football gaming platforms, including the PlayFuty fantasy football app.

- **Built the fantasy sports platform "PlayFuty" from scratch** using TypeScript, React.js, and TailwindCSS, serving 2,000+ active users.
- **Resolved production issues** using real-time Slack alerts, improving platform reliability and user experience.
- **Collaborated in Agile sprints** through sprint planning, backlog discussions, and peer code reviews.

Java Intern

Opalina Technologies

Nov 2023 - May 2024 Noida, Uttar Pradesh

An Indian software services and IT consulting company that builds enterprise, banking, fintech, analytics, web, and digital solutions for businesses.

- **Built a loan management and collections system from scratch** using Java, Spring Boot, and MongoDB, processing 2,000+ loans within the first month of launch
- **Designed and optimized REST APIs for core workflows** using MongoDB aggregation pipelines, caching mechanisms, and strategic indexing to improve query performance and response times
- **Implemented a secure end-to-end authentication and authorization system**, including role-based access control (RBAC) for users and internal operations
